-------	------------	---------	---	------	------------------

1. Problem Statement/ Current Condition	4. Counter matures/ Action Plan
<ul style="list-style-type: none">There's no dedicated place where you can ask/talk about topics that might interest the students in the university.Popular social medias where information is shared have been known to use more data than people are comfortable sharing.Students are forced to lose time looking for resources due to the lack of sorting options for these resources that are shared in conversations.There's no dedicated place to give the opportunity to other students to share any videos/articles they have created to help others.	<ul style="list-style-type: none">Create an open-source platform where any student can have the opportunity to add any wished feature.Create a forum for any student to participate on and share resources.The website will be moderated and updated daily so students don't have to look at anything else to be updated nor look for other resources.Students will be able to submit their own articles/news.
2. Goal Statement/ Target Condition	5. Check/Evaluate
<p>The target is to have an open-source platform where students can feel free to make any changes while also feeling more secure as they can see for themselves the data that we would be taking. The student would be able to open any discussion where others would be able to answer and share their thoughts. Additionally, students can sort any specific topic/resource they need by simply searching for keywords or by selecting any of the sorting options.</p>	<ul style="list-style-type: none">The project's success will be determined by how effective our advertisement is, as we need to keep a healthy user base if we want to satisfy the needs.Students actively participating would provide us with a good idea of success, if we don't see active discussions taking place then we have failed to provide students with a better alternative to social media.Social media is very popular and even if we successfully provide more sorting options, a better UI/UX experience, we still might not see as much traffic as people will continue to use social medias and get their university related news and resources from there.
3. Cause Analysis	6. Verify/Standardize
	<ul style="list-style-type: none">Learn new frameworks and workflows which will provide experience for future projects and any job opportunities in the same web development fields.Maintain the project open source to provide the opportunity to other students to add any wished feature while also giving students the opportunity to investigate exactly what the web application is doing in hopes of reducing any privacy concerns.We would continue to advertise the website as success will directly depend on how big of a userbase we can maintain, which will directly depend on the popularity and features added.
